WORKPLACE SAFETY

Asphalt crews pause for a Take 5 meeting to ensure all safety considerations are taken into account prior to the start of work.

Have you ever passed by the I-15 NOW project and witnessed a scene similar to the one pictured here?

Supervisors and foremen are required to hold "Take 5" safety meetings throughout the day! These "stand-up" meetings are designed to call attention to specific items requiring safety awareness on the project. Experience has proven that the more safety is discussed, the safer the work place becomes.

In addition to the "Take 5" meetings, project management regularly holds project-wide meetings prior to each shift on the project. Safety practices are taught and encouraged at these meetings and work place examples are displayed via photos for discussion.

Prior to each major work activity, special emphasis is placed on the types of hazards that may be faced and instruction is given to help crew members stay aware and alert!

Of course, every person that steps foot inside the project is required to wear a hard hat, safety glasses, a fluorescent vest and sturdy workboots.

Our goal is to build a modern, safe and convenient highway and to make sure that every member of the project returns home safely!
